a literary adventure you won't soon forget grab your copy of beyond the shadows today and step into a world where the paranormal meets the pulse pounding thrill of the unknown

shadow algorithms data miner provides a high level understanding of the complete set of shadow concepts and algorithms addressing their usefulness from a larger graphics system perspective it discusses the applicability and limitations of all the direct illumination approaches for shadow generation with an emphasis on shadow fundamentals the boo

this book constitutes the refereed proceedings of the 21st european symposium on programming esop 2012 held in tallinn estonia as part of etaps 2012 in march april 2012 the 28 full papers presented together with one full length invited talk were carefully reviewed and selected from 92 submissions papers were invited on all aspects of programming language research including programming paradigms and styles methods and tools to write and specify programs and languages methods and tools for reasoning about programs methods and tools for implementation and concurrency and distribution

the year 2019 saw the centenary of eddington's eclipse expeditions and the corroboration of einstein's general relativity by gravitational lensing to mark the occasion a special issue of universe has been dedicated to the theoretical aspects of strong gravitational lensing the articles assembled in this volume contain original research and reviews and apply a variety of mathematical techniques that have been developed to study this effect both in 3 space and in spacetime these include mathematical properties of the standard thin lens approximation in particular caustics optical geometry the gauss bonnet method and related approaches lensing in the spacetime of general relativity and modified theories black hole shadows

behavioral language and reasoning are expressions of neural functions par excellence as the brain must draw on sensory modalities to gather information on the rest of the body and on the outer world cortical areas processing the identity and location of the sensory inputs were once thought to be organized with some branches dedicated to complex features yet current studies have uncovered synergistic effects at early stage cognitions as well as higher level association areas a less hierarchical functional architecture of the brain has emerged such that irrespective of sensory modality inputs are assigned to the best suited cortical substrate
